

CHAM CONG

Quick Start

1. Install dependencies:

```
npm install
```

2. Initialize infrastructure:

```
docker compose -f infras/docker-compose.yml exec -T postgres psql -U postgres -c "CREATE DATABASE chamcong;"
```

```
docker compose -f infras/docker-compose.yml up -d
```

3. Initialize the database and seed demo users:

```
npm run initdb  
npm run initdata
```

4. Start the app:

```
npm start
```

App will be running at <http://localhost:3000>
